

Give a budget. Not your wallet.

Funded spending for people and agents.

Local payment checks. Collection on Arbitrum.

Who can spend—and who can accept?

THE OWNER

Delegate a purchase.
Keep exposure bounded.

THE SELLER

Accept the payment.
Know what can be collected.

Agents / Known shops / Future machines

The opportunity: controlled spending with locally checkable payment evidence.

Stablecoins are becoming payment rails.

~\$400B

Estimated stablecoin payments in 2025

2x

year over year

Agent-payment infrastructure is also entering real-world use.

Source: Stripe, 2025 annual update · 24 Feb 2026. Market context—not our TAM.

One funded budget. Explicit boundaries.

01

SELLER

Who gets paid

02

SPENDER

Who may spend

03

CAP

Maximum exposure

04

EXPIRY

Collection deadline

USDC held in escrow. Purchases authorized by signed notes.

Arbitrum Sepolia testnet · Seller collects on-chain before expiry.

Start with repeat-use paid services.

Paid API & data sellers

Frequent purchases

Payment tied to delivery

Collection and recovery

Entry point: SDK + MCP integration. Success: repeat use and reliable collection.

Open protocol. Paid seller operations.

OPEN CORE

Contract + SDK
Owner-controlled budgets
No contract platform fee

PROPOSED HOSTED SERVICE

Durable payment records
Collection + reconciliation
Monitoring + recovery

Subscription / usage pricing to validate. No revenue or willingness-to-pay claim.

Separate purchases from settlement.

PURCHASE PATH

Signed note → Verify → Persist → Serve

COLLECTION PATH

Accrued spend → Seller collection on Arbitrum

Independent seller workloads. One authoritative record per certificate. TPS unbenchmarked.

The channel is the baseline.

EXISTING ALTERNATIVES

Solana payment channels
Stripe machine payments
Wallet permissions + prepaid credits

OUR FOCUS

A usable funded budget.
A dependable seller
workflow.

Sources: Solana payment channels; Stripe annual update. x402/MPP compatibility: future work.

A narrow start. A broader application.

START

Paid services

API and data sellers
Repeat small purchases

PILOT NEXT

Known shops

Local acceptance
People and families

EXPLORE

Machine payments

Local AI and robotics
No integration claimed

Connectivity context: ITU estimates 2.2B people offline in 2025. Not our TAM.

Local acceptance has conditions.

BEFORE

Fund and verify

DURING

Exchange notes. Preserve seller state.

BEFORE EXPIRY

Reconnect and collect

Local payment checks do not mean offline blockchain settlement.

Built to inspect. Not yet production-proven.

AVAILABLE IN TESTNET

Escrow + payment flow
SDK, API and MCP tools
Owner and seller interfaces

NEXT VALIDATION

Release gate + onboarding
Pilot usage + collection reliability
Independent security audit

Founder-built with AI assistance · Pre-revenue · No independent audit yet.

Give a budget. Not your wallet.

Pilot partners + independent security review

One paid-service operator. One known-shop pilot.
